

**IN THE CLAIMS:**

Please AMEND the claims in accordance with the following:

1. (Currently Amended) A payback system for making payback to a product user or a middleman when a service is received by using a product distributed by a product manufacturer or the middleman, characterized by:

recording means recording use result information of services received by the product user using the product;

storage means for storing the recorded use results of the service received by the product user by using the product; and

calculation means for calculating a payback value or payback values to one or both of the product user and the middleman based on said storage means the stored recorded use results.

2. (Original) The payback system as claimed in claim 1, characterized in that:  
the product is an information-processing product; and  
the service is provided by means of the information-processing product.

3. (Currently Amended) A payback method for making payback to a product user or a middleman when a service is received by using a product distributed by a product manufacturer or the middleman, ~~including~~characterized by the steps of:

recording the services received by a user using the product;

storing use results of the recorded service received by the product user by using the product; and

calculating a payback value or payback values to one or both of the product user and the middleman based on the stored use results the stored recorded use results.

4. (Currently Amended) A payback system in which a customer receives a product directly or via a middleman from a product provider or a product and service provider, and receives a service from a service provider or the product and service provider by using the product, characterized by:

recording means recording a use of services received from the product by the customer;

storage means for storing use results of the recorded service received by the customer by using the product; and

determination means for determining based on the stored recorded use results, a payback value or payback values of the product to ~~one or both of~~ the customer and the middleman.

5. (Original) The payback system as claimed in claim 4, characterized in that: the product is an information-processing product; and the service is provided by means of the information-processing product.

6. (Currently Amended) A network service payback system for making payback to a distributor of an information-processing product having a network connection function, the information-processing product being distributed to a customer so that a network service is provided for payment to the customer by means of the information-processing product, the network service payback system characterized by:

distribution channel storage means for storing the distributor of the information-processing product, the distributor being correlated with information-processing product identification information for identifying the information-processing product;

information-processing product information storage means for storing customer identification information for identifying the customer and the information-processing product identification information registered with a network service provider by the customer, the customer identification information being correlated with the information-processing product identification information and storing use result information of services received by the customer using the information-processing product; and

payback calculation means for calculating a payback value to be paid to the distributor by the network service provider based on the customer identification information stored in the information-processing product information storage means so as to be correlated with the information-processing product identification information stored in the distribution channel storage means and on the stored use result information of the network service, the stored use result information being separately collected and correlated with the customer identification information.

7. (Original) The network service payback system as claimed in claim 6, characterized in that the use result information is a charge for use of the network service by the customer.

8. (Original) The network service payback system as claimed in claim 6, characterized in that the use result information is a period of registration of the customer with the network service.

9. (Currently Amended) A computer-readable recording medium recorded with a payback operation program for making payback to a distributor of an information-processing product having a network connection function, the information-processing product being distributed to a customer so that a network service is provided for payment to the customer by means of the information-processing product, the payback operation program causing a computer to function as:

distribution channel storage means for storing the distributor of the information-processing product, the distributor being correlated with information-processing product identification information for identifying the information-processing product;

information-processing product information storage means for storing customer identification information for identifying the customer and the information-processing product identification information registered with a network service provider by the customer, the customer identification information being correlated with the information-processing product identification information and storing use result information of services received by the customer using the services of the information-processing product; and

payback calculation means for calculating a payback value to be paid to the distributor by the network service provider based on the customer identification information stored in the information-processing product information storage means so as to be correlated with the information-processing product identification information stored in the distribution channel storage means and on the stored use result information of the network service, the stored use result information being separately collected and correlated with the customer identification information.

10. (Currently Amended) A payback system for making payback to both a product user and a middleman when a service is received by using a product distributed by a product manufacturer or the middleman, characterized by:

a storage device storing use result information ~~results~~ of the servicesservice received by the product user by using the product; and

a calculation device calculating a payback value or payback values to ~~one or both of~~ the product user and the middleman based on the stored use result information stored in said storage device.

11. (Original) The payback system as claimed in claim 10, characterized in that:  
the product is an information-processing product; and  
the service is provided by means of the information-processing product.

12. (Currently Amended) A payback system in which a customer receives a product directly or via a middleman from a product provider or a product and service provider, and receives a service from a service provider or the product and service provider by using the product, characterized by:

a storage device storing use result information~~results~~ of the ~~service-services~~ received by the customer by using the product; and

a determination device determining a payback value or payback values of the product to ~~one or both of~~ the customer and the middleman based on the stored use result information stored in said storage device.

13. (Original) The payback system as claimed in claim 12, characterized in that:  
the product is an information-processing product; and  
the service is provided by means of the information-processing product.

14. (Currently Amended) A network service payback system for making payback to a distributor of an information-processing product having a network connection function, the information-processing product being distributed to a customer so that a network service is provided for payment to the customer by means of the information-processing product, the network service payback system characterized by:

a distribution channel storage device storing the distributor of the information-processing product, the distributor being correlated with information-processing product identification information for identifying the information-processing product;

an information-processing product information storage device storing customer identification information for identifying the customer and the information-processing product identification information registered with a network service provider by the customer, the customer identification information being correlated with the information-processing product

identification information and storing use result information of services received by the customer using the services of the information-processing product; and

a payback calculation device calculating a payback value to be paid to the distributor by the network service provider based on the customer identification information stored in the information-processing product information storage device so as to be correlated with the information-processing product identification information stored in the distribution channel storage device and on the stored use result information of the network service, the stored use result information being separately collected and correlated with the customer identification information.

15. (Original) The network service payback system as claimed in claim 14, characterized in that the use result information is a charge for use of the network service by the customer.

16. (Original) The network service payback system as claimed in claim 14, characterized in that the use result information is a period of registration of the customer with the network service.

17. (New) A payback system for making payback to a customer and a middleman when a service is received by using a product distributed by a product distributor such as a manufacturer or the middleman, comprising:

distribution channel storage means for storing information correlating the distributed product by the product distributor to the customer;

product usage storage means for storing information about the customer's use of the product; and

calculation means for calculating a payback value or payback values to the customer and the middleman based on the stored information about the customer's use of the product.
